## Launching our new LED FAA A-0, A-1 and E-1 Obstruction Lighting Kits

**Somerville, Victoria, Australia – September 19, 2019** – Our A-0, A-1 and E-1 Obstruction Kits have arrived. These new kits are designed to mark A-0, A-1 and E-1 designated towers and similar type structures.

Our kits are easy to buy and install, making the task of marking obstructions less complex. Each kit contains all the necessary components for each application.

These kits have best-in-class system power draw, allowing tower owners to utilise solar for locations lacking reliable or cost-effective access to regular utility power.

Efficient LED optics are used in all Avlite Obstruction Lights, providing optimal aviation safety. LEDs are housed in corrosion-resistant lenses, ensuring years of maintenance free operation and reliable service.

A range of accessories are available including brackets, cable and junction boxes. Companies, contractors and governments can now quickly and easily purchase all obstruction lighting components from a single source. This simplifies the ordering process and reduces the possibility of getting incompatible components from different manufacturers.
