

Application details

The Universal Gateway has many applications, including retrofitting or supplementing SATCOM into a system.

The PLC inside the existing controller or kit is connected via MODBUS TCP/IP to the Universal Gateway. This enables wireless control via SATCOM to Star2M to control and monitor the system.

Easy set-up is standard and available via the Universal Gateway Configurator Application.

Contact your Avlite Sales representative to learn more about the Universal Gateway.

Interfaces available

- Serial configuration interface via USB
- Satellite communication (SATCOM) interface
- MODBUS TCP/IP
- MODBUS RTU via RS-485

Min UGW Firmware version: S100

Note: This application can be used in conjunction with other applications and notes.
