

Application details

The Universal Gateway has many applications, including use as a wireless expansion tool.

The AvMesh™ Controller connects via RF to the Universal Gateway. The Universal Gateway then connects to other endpoints such as lights or a windsock.

Easy set-up is standard and available via the Universal Gateway Configurator Application.

Contact your Avlite Sales representative to learn more about the Universal Gateway.

Interfaces available

- RF mesh network communication

Min UGW Firmware version: S100

Note: This application can be used in conjunction with other applications and notes.
